

LOVE IS IN THE AIR

Set of 11 Valentine's day special heart designs!

Design no.H1, H2 & H11 are filled designs and quite dense. You need to stabilize and hoop properly. Use a proper stabilizer according to the material you are embroidering on and make sure to hoop it really tight as the fabric can shift during stitching and misalign the designs!

Rest of the 8 designs are not as dense but proper hooping and stabilizer is a must for every embroidery design.

For each of these test stitch outs I used a medium weight iron on cutaway stabilizer and the fabric used is cotton.

Use a hoop size closest to the design, for example avoid using a 5x7 hoop if you are trying to embroider only one 4x4 design! Smaller hoops give tighter hooping and better results.

Design no.H4 is an applique design, follows the basic applique steps! First color the placement line, then lay a scrap fabric covering the outline. Either tape it in place, use adhesive spray or hold it in place

carefully while the next color is stitched. 2nd color is tack down stitch, next remove hoop and trim excess fabric as closely as possible. 3rd color will be the border and in this design a contrasting 4th color for the border is used too.
