

Recommendations for embroidering Wind flowers with 3D element

To get a beautiful embroidery, fabric should be well stabilized and fixed in the hoop.

Embroidery of 3D element:

1. Put the water-soluble stabilizer in the embroidery frame. Embroider the first color, which will show the location of the appliqué.

2. Put the cloth on the specified place. Embroider the second color - zig-zag. After this, you need to carefully cut the tissue close to the zig-zag line. Embroider the remaining design colors.

Use the lower thread of the same color as the upper thread.

3.Remove the water-soluble stabilizer residues in warm water. Dry the 3D element.

Embroidery of Wind Flower:

1. Embroider the first 7 colors of the design. The seventh color will indicate the location of the appliqué.

2. Place the cloth on the specified places. Embroider the second color - zig-zag. After this, you need to carefully cut the tissue close to the zig-zag line. Embroider the remaining design colors. Except for the last two colors. Color number 10 will show the location of the 3D element.

3. Place the 3D element in the indicated place, then you can once again embroider color number 10 to fasten the 3D petal. Embroider 11 and 12 colors - this is the middle of a flower.

You can also sew 3D elements by hand, using beads to decorate the middle of the flower.

The remaining flowers from this set are embroidered in the same way.

Now you can enjoy the beauty of your embroidery!
