

Instruction

Used with water soluble stabilizer.

1. Hoop stabilizer only. You can use any of your favorite threads for this design.

Any color. For lace, I prefer Rayon thread (Viscose), then the lace is more expressive and, if necessary, soft and delicate. Use the same top and bottom thread to perfect result.

2. Stitch design directly on stabilizer

3. Unhoop and trim excess stabilizer. If you want your embroidery to be soft, submerge the embroidered stabilizer in water for 30 minutes to 12 hours. In this case, you do not need to rinse or wring out.

If you want your embroidered objects to acquire a rigid shape, which is necessary for Christmas tree decorations, then try to hold them in water for no more than 5-10 minutes.

4. Lay out the design on a towel, spread it evenly and press down with the other half of the towel.

5. You can also decorate bows with beads, sequins, etc.

Enjoy the result of your work!

I will be glad to see you again in my store!
