WHAT IS NEEDED:

Padding 1 cm

Foam 1 cm

Felt or fabric of your choice

I put the stabilizer in the frame, I use plastic sheets that have the same characteristics as the water soluble, and it manages to stabilize in an excellent way.

I embroider the position trace, then place the foam on top of it, about 1 cm high, embroider the next trace and cut out the whole shape.

The cutout must be very neat and close to the seam which is done in a tight zigzag, so that the stitches cannot be cut.

I proceed in the same way with the padding layer

On the shape I go to place pieces of fabric and proceed to perform all the applications, I recommend to perform one step at a time and to cut out precisely each application without leaving any fabric edges

Once all the applications are finished, I proceed with the whole embroidery part
Then I turn the frame over and place a rectangle of fabric on the back
will be the lining. I fix it with pins, I embroider the next line, I cut out the excess
of fabric and finish with the cover stitch.

**I REPEAT THE SAME OPERATIONS BOTH FOR THE CHRISTMAS TREE AND
FOR THE SLED - WITH HOT GLUE I ASSEMBLE THE PARTS**
