

FSL STAR LAMP/TREE TOPPER

1. Like any other FSL, hoop 2 layers of water soluble stabilizer and adjust the pieces in the hoop to embroider 10 pieces of the left facing(piece A) and 10 pieces of the right facing(piece B) design. In all 20 pieces. (Do not over crowd the pieces in the hoop)

2. Rinse under running water just enough to wash away the excess WSS but do not overdo it or else the FSL pieces won't be stiff enough!
3. Lay on kitchen paper towel, after the excess water is soaked up let them dry flat.
4. When almost dry, iron the pieces laying a piece of muslin or any thin cotton over them.
5. Join 10 pieces of each face alternating left and right facing pieces to achieve this...You will have 2 of these, 1 front face and 1 back face!

6. This can be done using the zigzag stitch on a sewing machine and I prefer to use clear thread for this!

7. Join the front and back faces by hand stitching the edges.

8. I left an opening at the base for sliding over a light!
